Cognitive Engineering

MIST/COGS 128

This class offers an introduction to cognitive engineering with an emphasis on cognitive science and a human-centered approach to interactions with technology. Topics include:

- Human-computer interaction
- Human robot interaction
- Speech recognition systems
- Animated characters
- Virtual reality systems
- Ubiquitous computing
- Computer supported cooperative work

"We will explore the implications of cognitive science research on the design and use of electronic devices, user interfaces, and more in the 21st Century."
